1. This is the question.

*Proof 1.*

2. This is the question.

*Disproof 2.*

3. This is the question.

*Answer 3.*

Answer.m

```
1 % Plot function f(x) = 2*x^3 - x - 2
2 ezplot('2*x^3-x-2', [0, 2])
3 hold on
4 plot([0, 2], [0, 0], 'r')
```

```
1 def __self__(self):
2 for i in range(10):
3     print(f"This number is {i}.")
```

```
1 public static void main(String[] args) {
2     System.out.println("Hello World!"); // comment
3 }
```

---

**Algorithm 1:** Bisection Algorithm

---

**Input:**  $a, b, M, \delta, \epsilon$

$u \leftarrow f(a)$

$b \leftarrow f(b)$

$e \leftarrow b - a$

**Output:** output

```
1 begin
2   if  $\text{sign}(u) = \text{sign}(v)$  then
3     stop
4   for  $k=1$  to  $M$  do
5      $e \leftarrow e/2$ 
6      $c \leftarrow a + e$ 
7      $w \leftarrow f(c)$ 
8     return  $k, c, w, e$ 
9     if  $|e| < \delta$  or  $|w| < \epsilon$  then
10      stop
11     if  $\text{sign}(u) \neq \text{sign}(v)$  then
12        $b \leftarrow c$ 
13        $v \leftarrow w$ 
14     else
15        $a \leftarrow c$ 
16        $u \leftarrow w$ 
```
